# Deductive Database Query Evaluation Algorithms and Implementation of the QSQ Algorithm

© A.I. Vybornov, A.V. Dubanov

Bauman Moscow State Technical University, Moscow, 105005, Russia

*The paper surveys existing algorithms of the Datalog-based deductive database query evaluation. The most effective one, a recursive «query-subquery» (QSQR) algorithm, was implemented as a part of the application programming interface prototype.*

**Keywords:** *database, Datalog, QSQ algorithm, proof tree.*

**Vybornov A.I.** (b. 1993), a 4<sup>th</sup> year student of the Computer Science and Technologies Department of Bauman Moscow State Technical University. Specializes in compiler development and database programming. e-mail: art-vybor@ya.ru

**Dubanov A.V.** (b. 1975) graduated from I.M. Sechenov First Moscow State Medical University in 1998. Ph.D., Assoc. Professor of the Computer Science and Technologies Department of Bauman Moscow State Technical University. Specializes in the application of the computational methods and software development for biomedical research. Author of 20 publications. e-mail: qres@mail.ru
