# Target costing method usage for cost management of rocket-space technique

©. G.O. Baev

Bauman Moscow State Technical University, Moscow, 105005, Russia

*In this paper the author considers target costing method as one of the most promising ways to manage rocket-space technique cost in the modern environment. Price/quality ratio today is very important for clients of rocket-space industry. Reliable total costing of development and creation of rocket samples allows you to manage costs of new products and therefore predict "the lower price" of designed rocket.*

**Keywords:** target costing, rocket and space technology, feature, price, client.
