Kaluga Branch of Bauman Moscow State Technical University, Kaluga, 248000, Russia

To achieve the goal of improving management it is necessary to develop modern management methodology. Problems of the Russian enterprise management systems are the result of the transition of control systems that existed under the planned economy, to management in the market economy. When the Russian society moved to market economies, the task to form the Russian management appeared. It depends not only on the level of market development of commodity production on Russian territory, but also on creating opportunities for its mastering by the Russian specialists.

Keywords: control, management, development, concept.
