Bauman Moscow State Technical University, 105005, Moscow, Russia

*The circuit of contact of bodies with elastic soft coverings with the purpose of probably the greater account of the phenomena proceeding in the field of contact is simplified as much as possible. The formula for the description of nonlinear friction is offered [1]. By using this formula contact pressure is calculated.. The resource tribology and a condition of absence of catastrophic deterioration is determined.*

**Keywords:** coating, friction, heat generation, contact pressure.
