An approximate method is presented, based on the boundary element method (BEM), for the calculation of unsteady hydro dynamical forces on container cover in the process of underwater ejection of lifting vehicle.

Keywords: *underwater ejection of lifting vehicle, unsteady hydro dynamical forces, boundary element method.*

Plusnin A.V. graduated from Dnepropetrovsk State University by speciality Hydroaerodynamics and took a post-graduate course at the Wave and Gas Dynamics Department of Lomonosov Moscow State University. Ph.D., Assoc. Professor of the Computational Mathematics and Mathematical Physics Department of Bauman Moscow State Technical University, Deputy Chief of section of JSC "MIC "NPO Mashinostroyeniya". Author of several articles on unsteady problems in hydrogasdynamics and theory of elasticity. e-mail: andrey.plusnin@gmail.com
